

Elizabeth Ann Kelley

Ms Kelley has been actively engaged for 13 years in international efforts to address the potential harmful effects of electromagnetic fields (EMF) from both a health and public policy perspective. She holds a B.A. in social psychology from the University of California, Santa Barbara and a M.A. in Public Health Administration from the University of Southern California. Ms. Kelley worked on public health budget and program policy issues for the U.S. Department of Health Services from 1978 to 1986, initially as a U.S. Presidential Management Fellow. From 1997 to 2000, she was a leading appellant in the United States Federal court system challenging the current U.S. Federal Communications Commission human exposure guidelines. She was co-founder and first Executive Director for the U.S.-based EMR Network and the Council on Wireless Technology Impacts. Since 2006, she has been the Managing Director of the International Commission for Electromagnetic Safety (ICEMS) headquartered in Venice, Italy. She has organized and presented at several major EMF conferences in various parts of the world, including one held in Porto Alegre in 2003, has produced several film documentaries on EMF issues, has testified on EMF matters before the national legislative bodies of the United States, England and Japan, and has appeared as an EMF spokesperson on numerous radio and television programs in both the United States and Canada. She is a member of the Bioelectromagnetics Society.
